A Fast Eavesdropping Attack Against Touchscreens

Federico Maggi, Alberto Volpatto,
Simone Gasparini, Giacomo Boracchi, **Stefano Zanero**

Politecnico di Milano

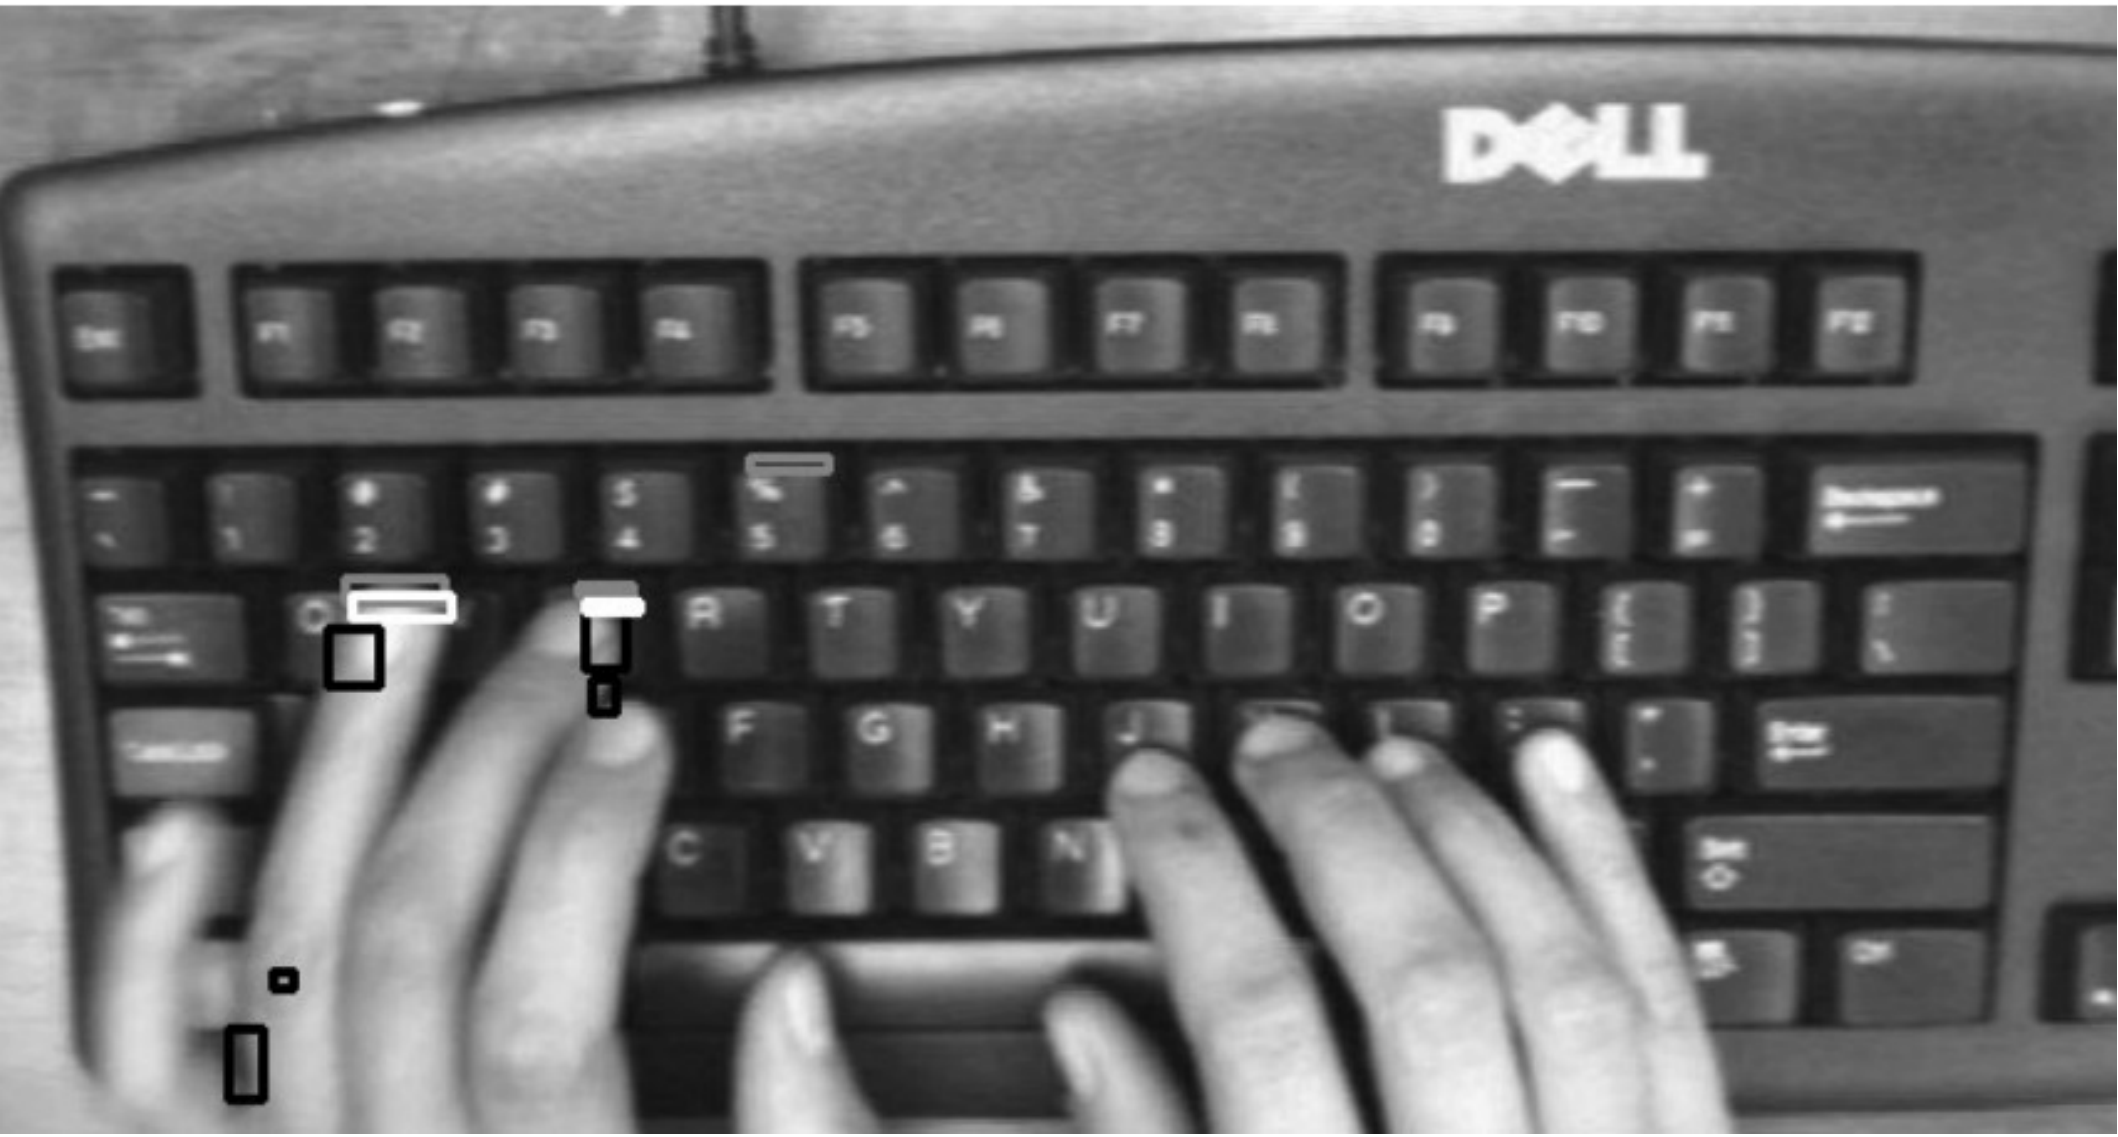
How sensitive data is compromised

- Direct attacks
  - Well-known in both literature and industry
  - Very active research community
- **Other types of attacks**
  - Social engineering attacks
  - Side-channel attacks
  - Difficult to mitigate (if not through awareness)

Side-channel Attacks

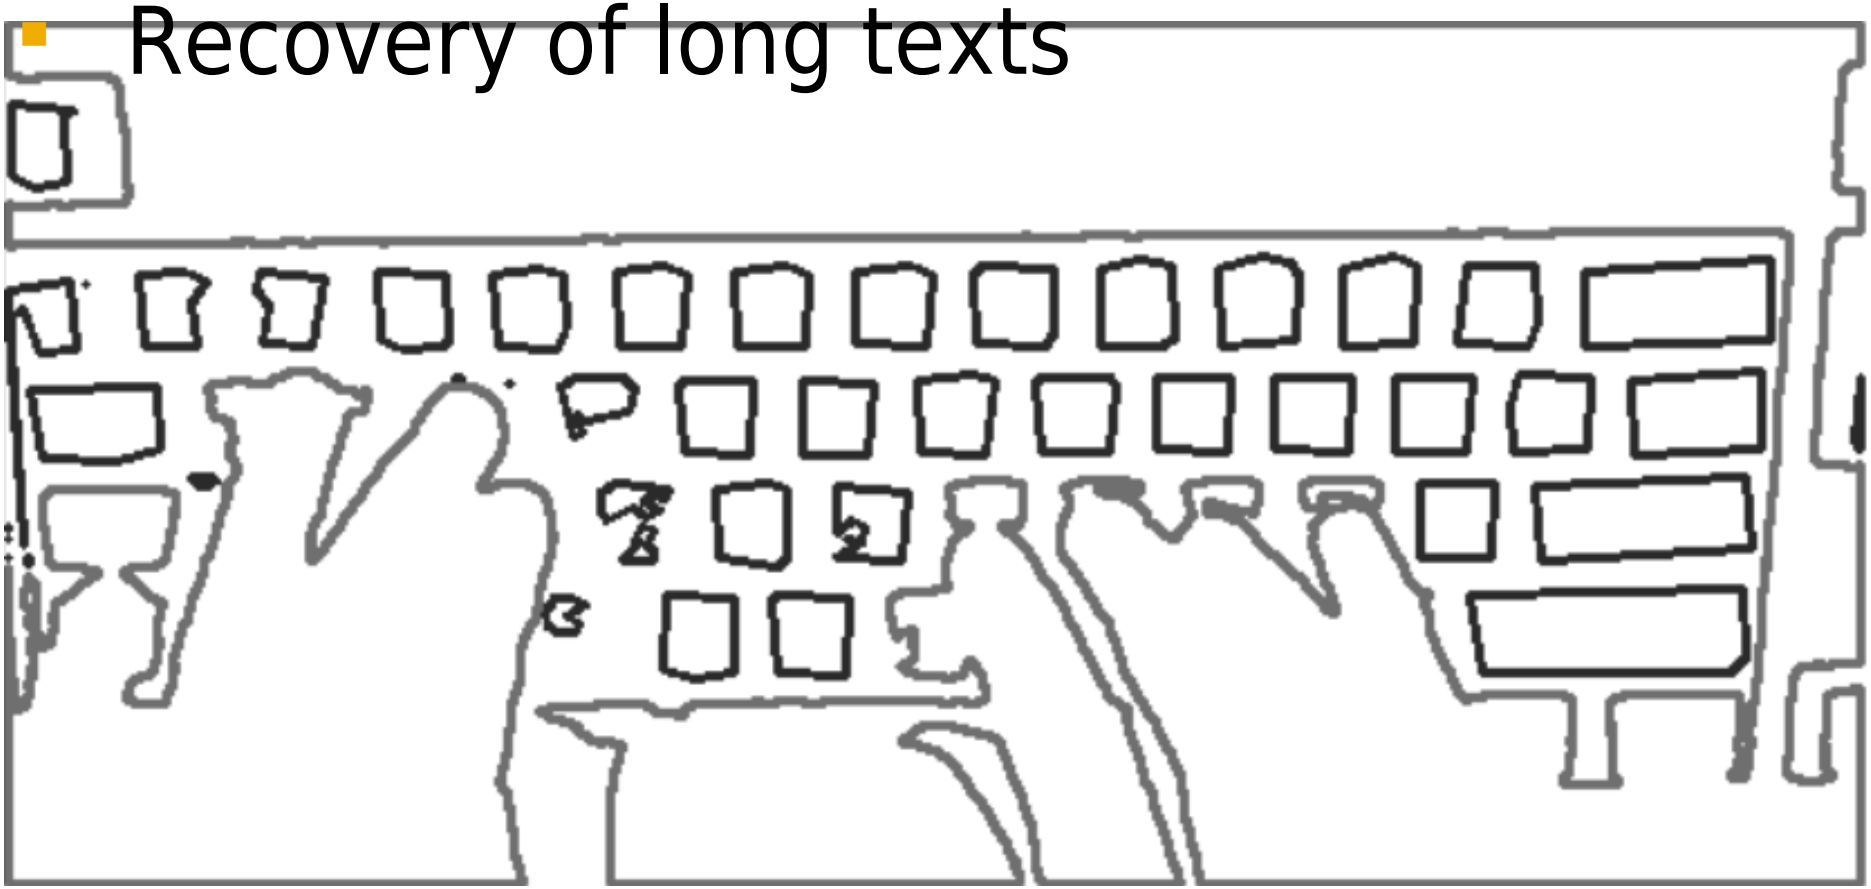
- Less known yet very effective
- Digital side-channels
  - Example: decrypting SSL through wifi LAN sniffing
- **Physical-world observation**
  - Direct observation
    - Shoulder surfing
  - Indirect observation
    - Sound emanations
    - Reflections
    - Magnetic radiations
    - Desk surface vibrations

Physical-world Observation



Automated Shoulder Surfing

- First attempt of **automatic** shoulder surfing
- Recovery of long texts



Ubiquitous Touchscreen Mobiles

- **2010** survey on 2,252 US citizens
  - 72% use a mobile phone for **texting**
  - 30% use a mobile phone for **instant messaging**
  - 38% use a mobile phone for Web **browsing**
- (1970) **touchscreen** technology was invented
  - 2010: **5 billion** US dollars market
  - 159% market **grow** rate
  - Q3 2010: 417 million of touchscreen

Automated Shoulder Surfing

- Non-automated
  - not interesting
  - time consuming
- Automated
  - Is it feasible?
  - Mobile context poses several constraints

Mobile Settings Constraints

- Moving target
- Fixed observation point not always feasible
- Very small keyboards
- No visibility of pressed keys
- No visible key occlusions

Touchscreen to the rescue

- Lack of tactile feedback
- Early soft keyboards were hard to use
- UI engineers came up with **usable keyboards**

Usability vs Security

- Old dilemma
- More secure, less easy to use
- Example: Google's 2-step authentication
  - Very secure
  - Very unusable
    - Wait for the verification code every time you do email
- Apply also in this context
  - Feedback-less touchscreen keyboards
    - hard to type on
  - Feedback-rich keyboard keyboards
    - easy to type on
    - eyes follow the feedback naturally during typing

Our approach

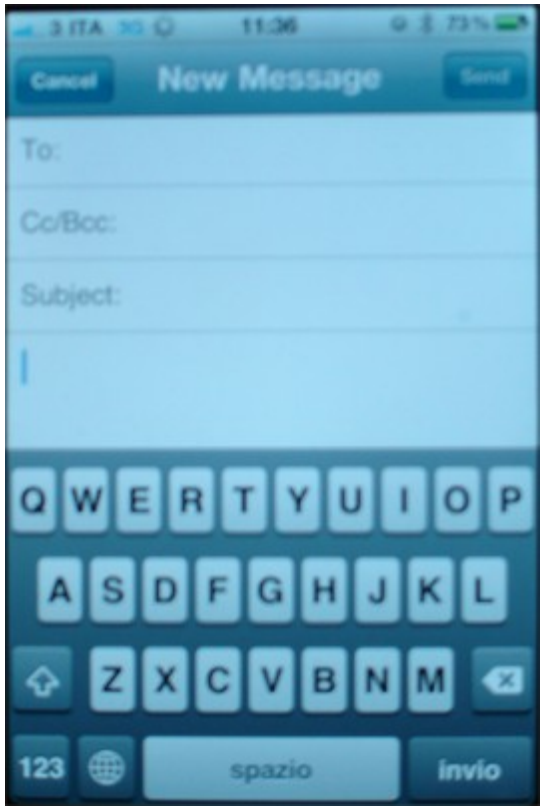
Simple Threat Model

- **Requirement 1**
  - iPhone-like visual feedback mechanism
- **Requirement 2**
  - Template of the target screen known in advance

Requirement 1 is often satisfied

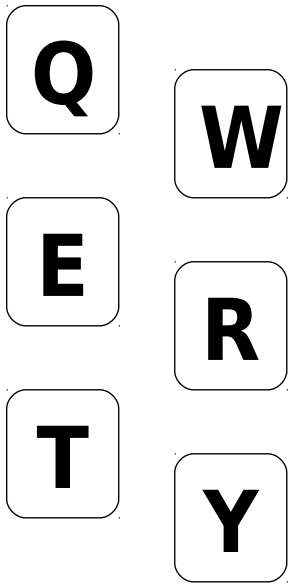
Requirement 2 is very easy to satisfy

SCREEN TEMPLATE



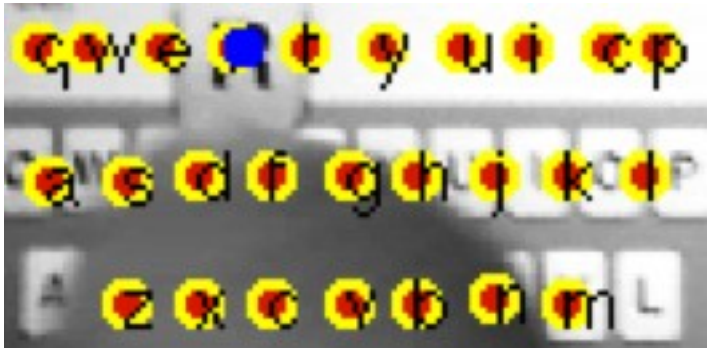
(screenshot)

KEY TEMPLATES



(synthetic, hi-res)

MAGNIFIED LAYOUT



(x,y-coordinates)

Outline of the Approach

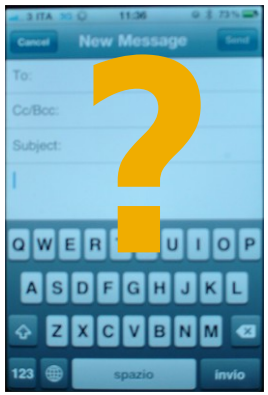
- **Phase 1**
  - Screen detection and rectification
- **Phase 2**
  - Magnified key detection
- **Phase 3**
  - Keystroke sequence reconstruction

Phase 1

- **Input**
  - Image depicting the current scene (current frame)
- **Output**
  - Synthetic image of the rectified, cropped screen
- **Procedure**
  - Screen detection
  - Screen rectification

Screen Detection

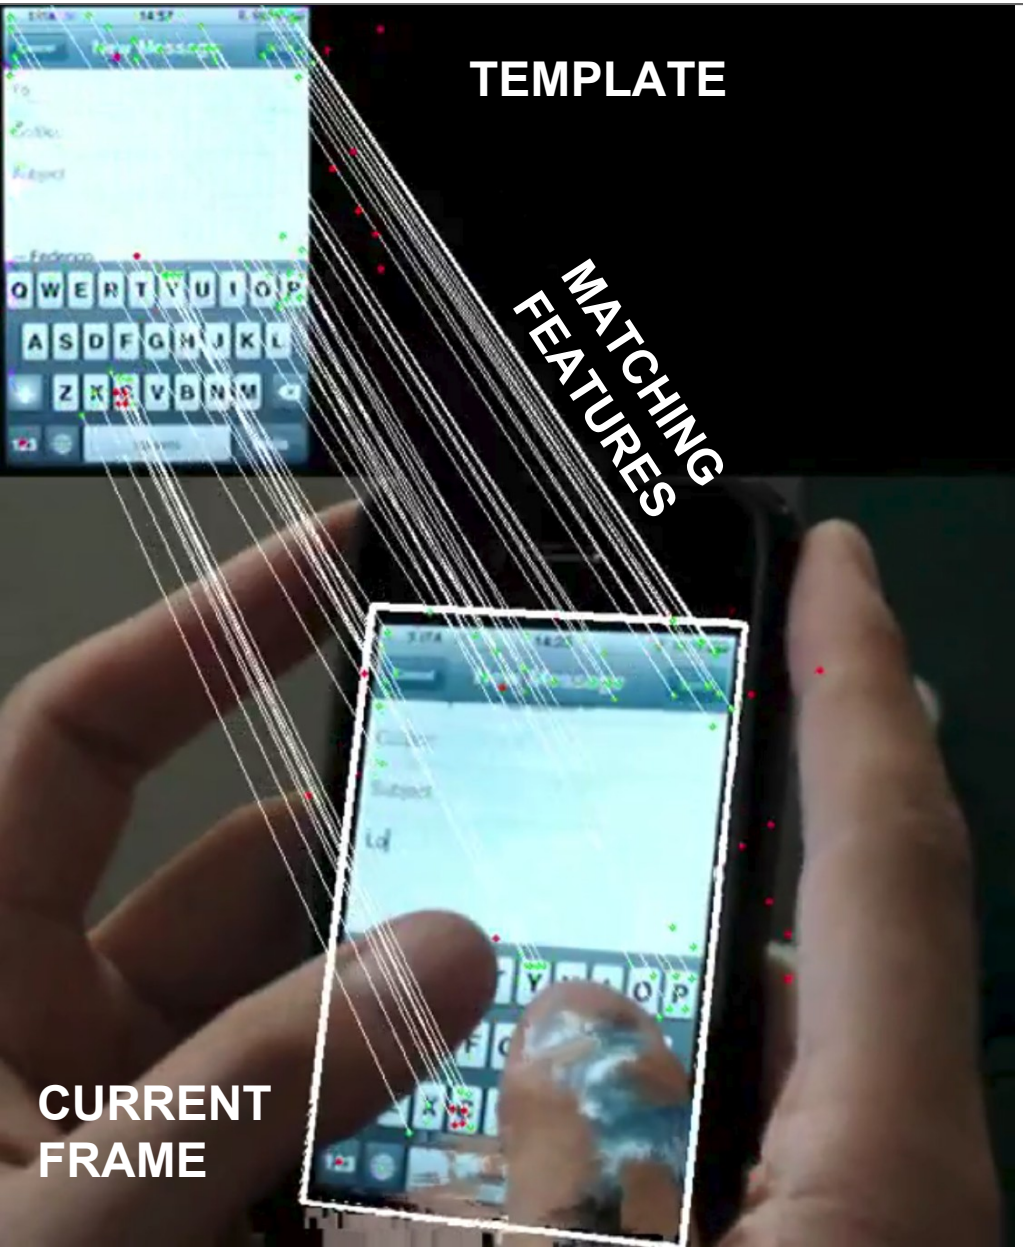
- The current frame is searched for the screen template (Requirement 1)



+

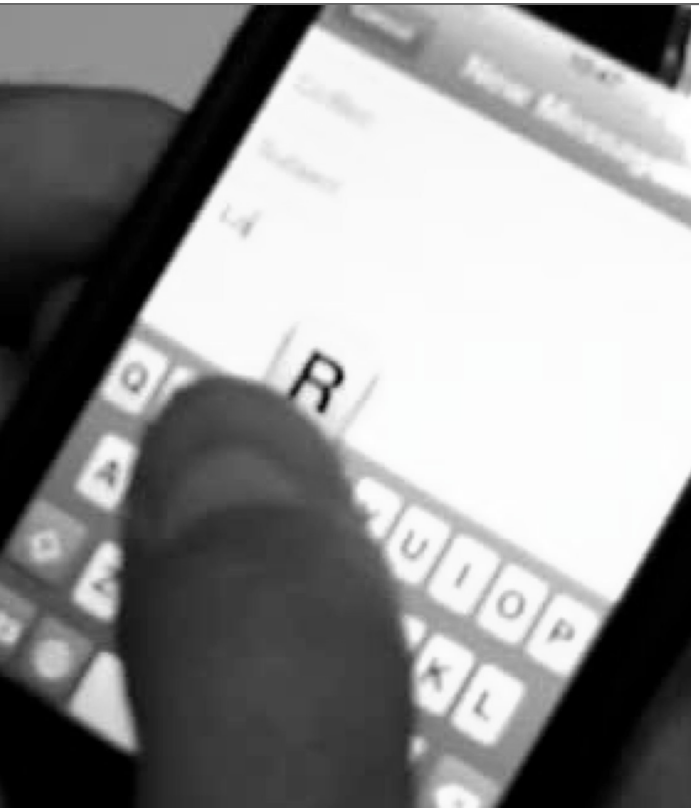
SCREEN TEMPLATE **CURRENT FRAME** **MATCHING PATCH**

Screen Detection via Template Matching

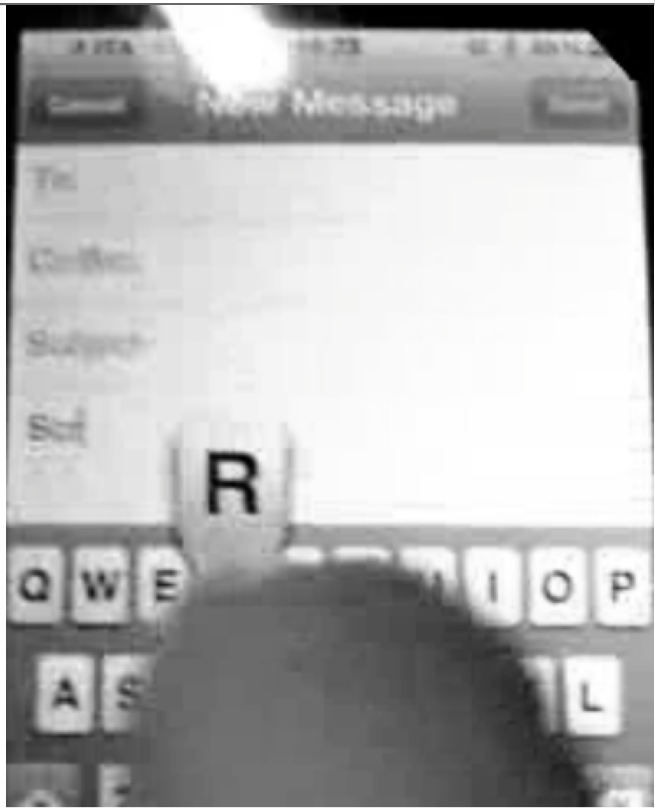


- **SURF** features
  - Edges
  - Corners
- Invariant to:
  - Rotation
  - Scale
  - Skew
  - Occlusions
- **Homography** estimation

Screen Rectification via Homography



- Estimate during screen detection
- Successfull matches improve matches in subsequent frames



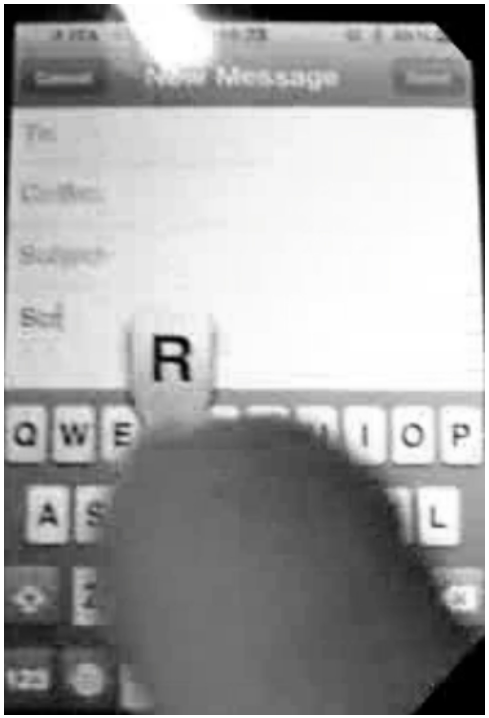
CURRENT FRAME

RECTIFIED FRAME

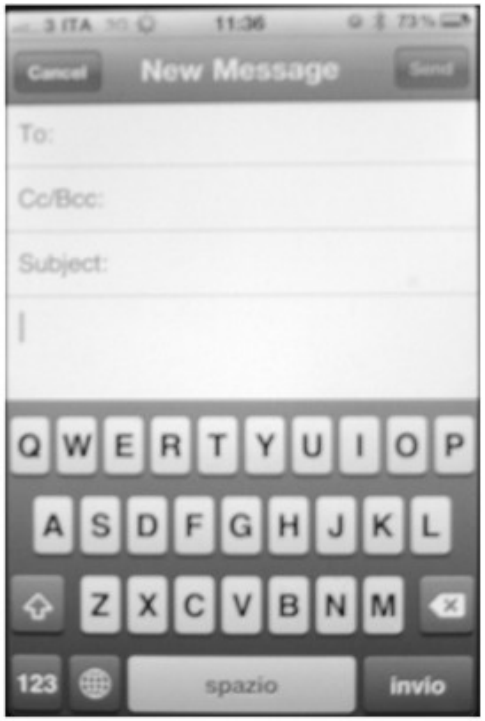
Phase 2

- **Input**
  - Image of the rectified screen
- **Output**
  - Areas where magnified keys appeared
- **Procedure**
  - Background subtraction

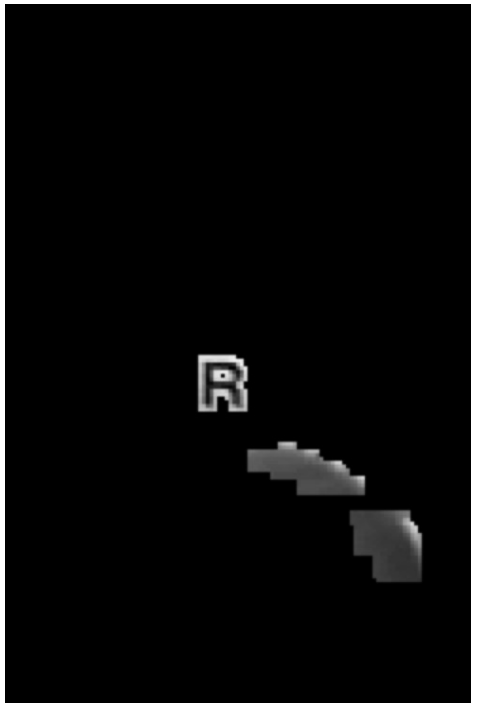
Pixelwise Background Subtraction



-

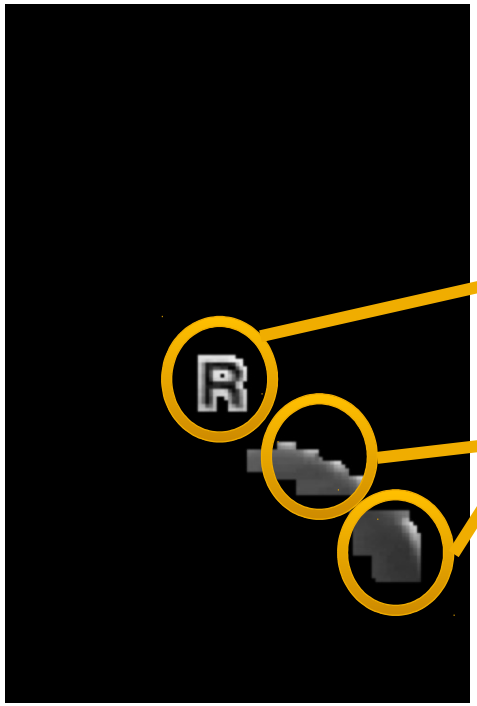


=



CURRENT FRAME **SCREEN TEMPLATE** **FOREGROUND**

Spurious output



HIGHLIGHTED KEY (MAGNIFIED-KEY CANDIDATE)

OTHER FOREGROUND ELEMENTS (NOISE)

FOREGROUND

Phase 3

- **Input**
  - Magnified-key candidates
- **Output**
  - Sequence of typed symbols
- **Procedure**
  - Approximate neighbors lookup
  - Best matching key identification
  - Fast pruning
  - Key sequence analysis

Approximate Neighbor Lookup

- Known keyboard layout (Requirement 2)
- Centroid identification
- Match centroids with keyboard layout

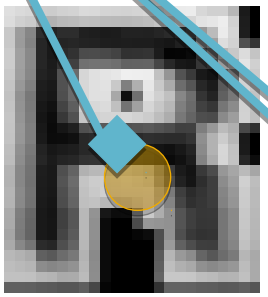
Known keyboard layout

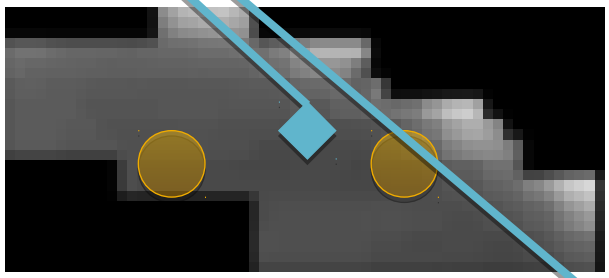
Q W E R T Y U I O P

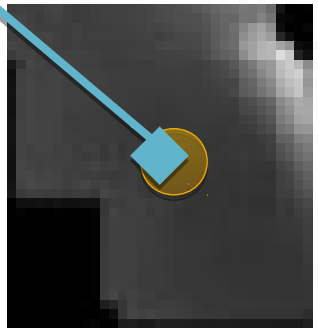
A S D F G H J K L

Z X C V B N M

Centroid identification

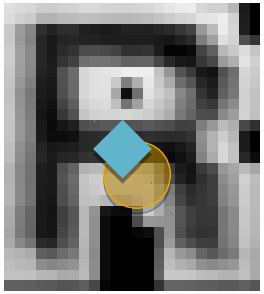




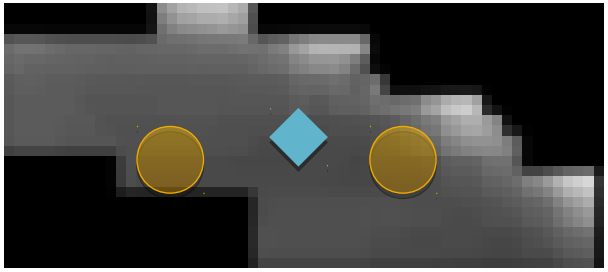


Match centroids with layout

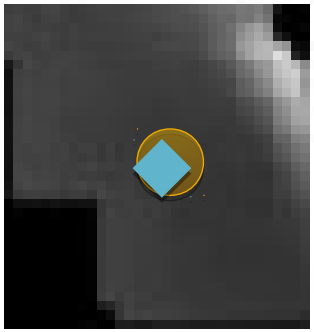
CENTROID 1

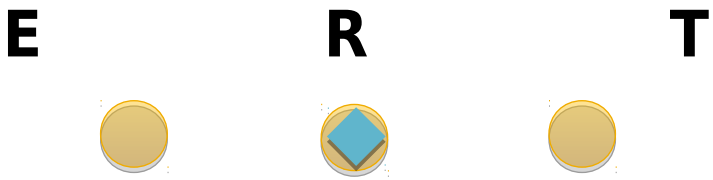


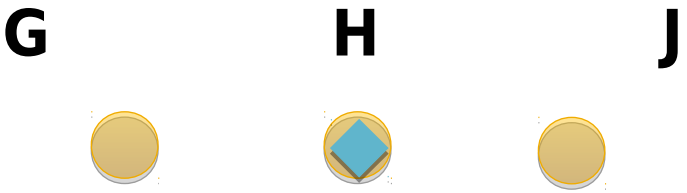
CENTROID 2



CENTROID 3

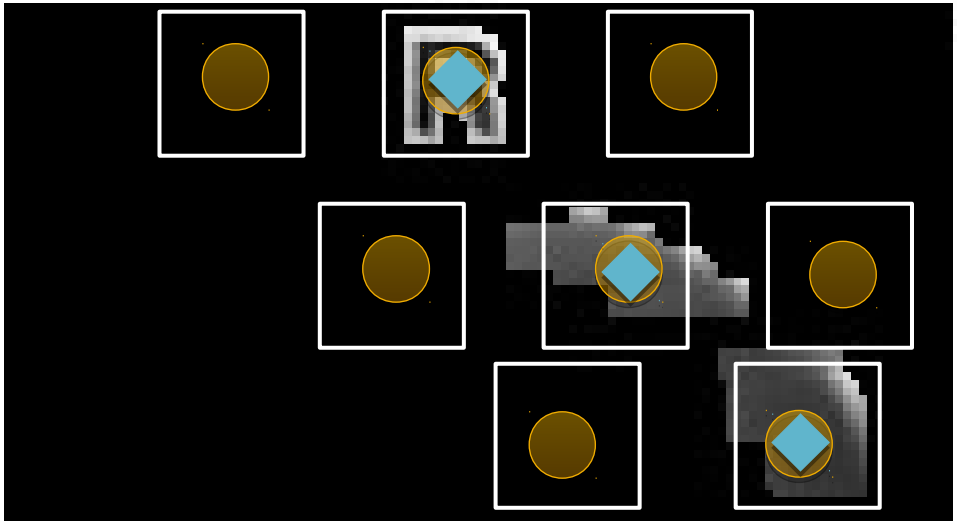


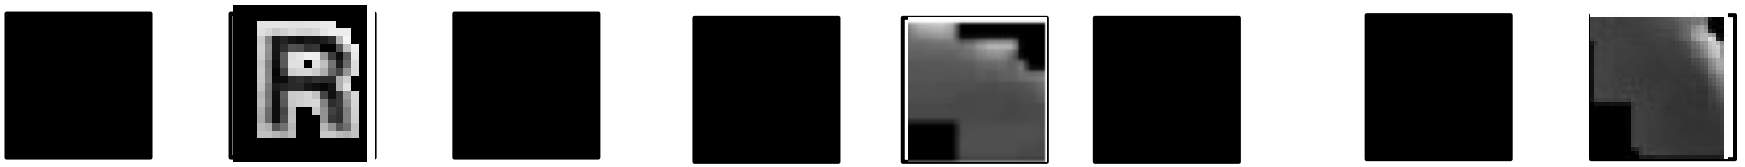




Key similarity

- Region of interest
- Key template (Req. 2)

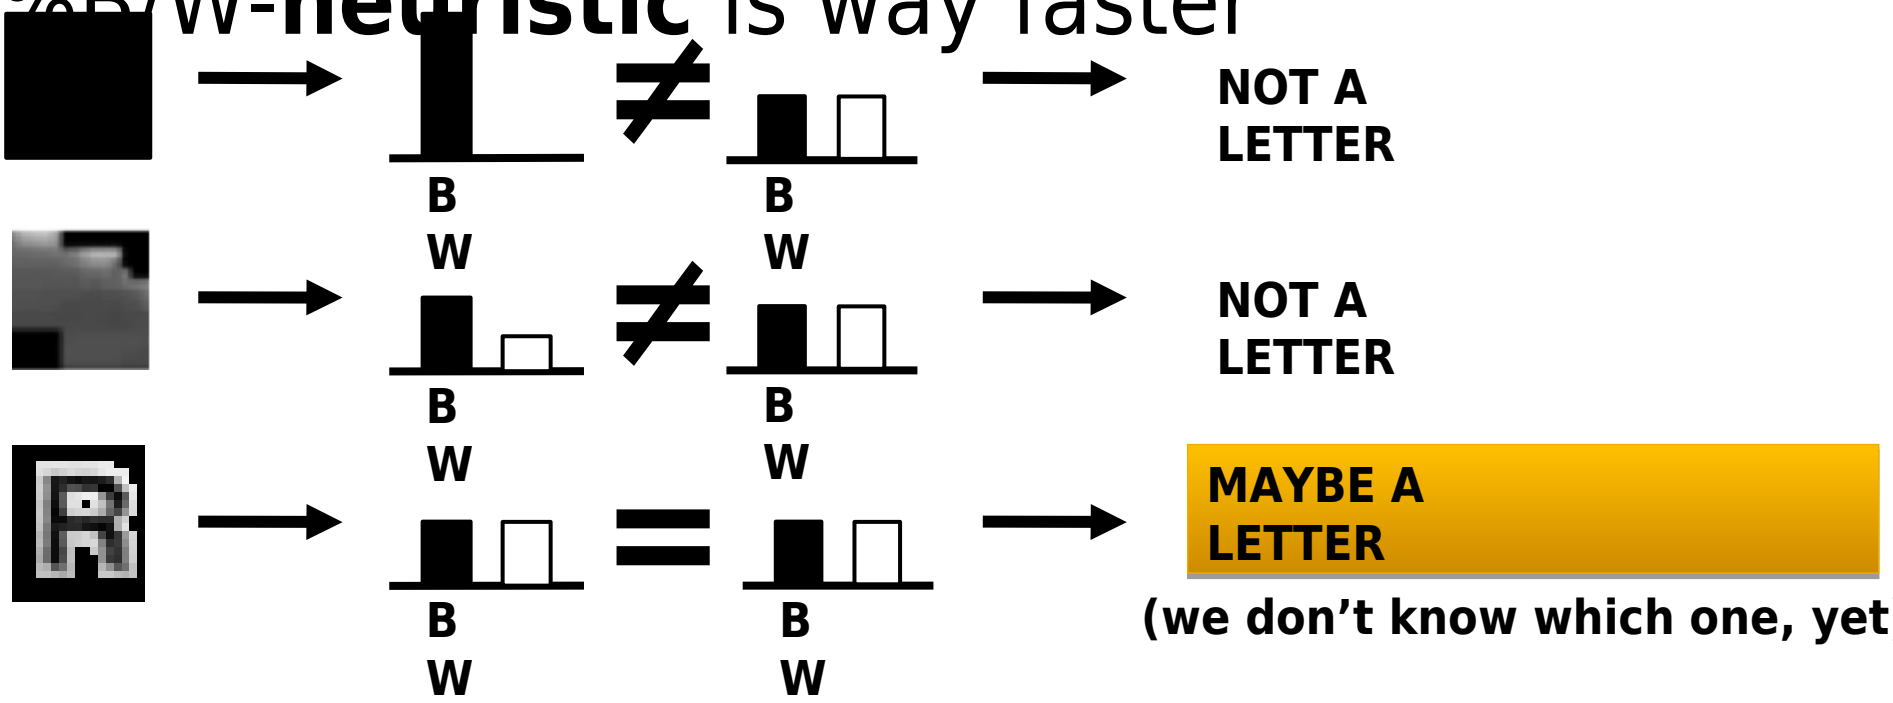




E	R	T	G	H	J	N	M
LOW	HIGH	LOW	LOW	MED	LOW	LOW	MED

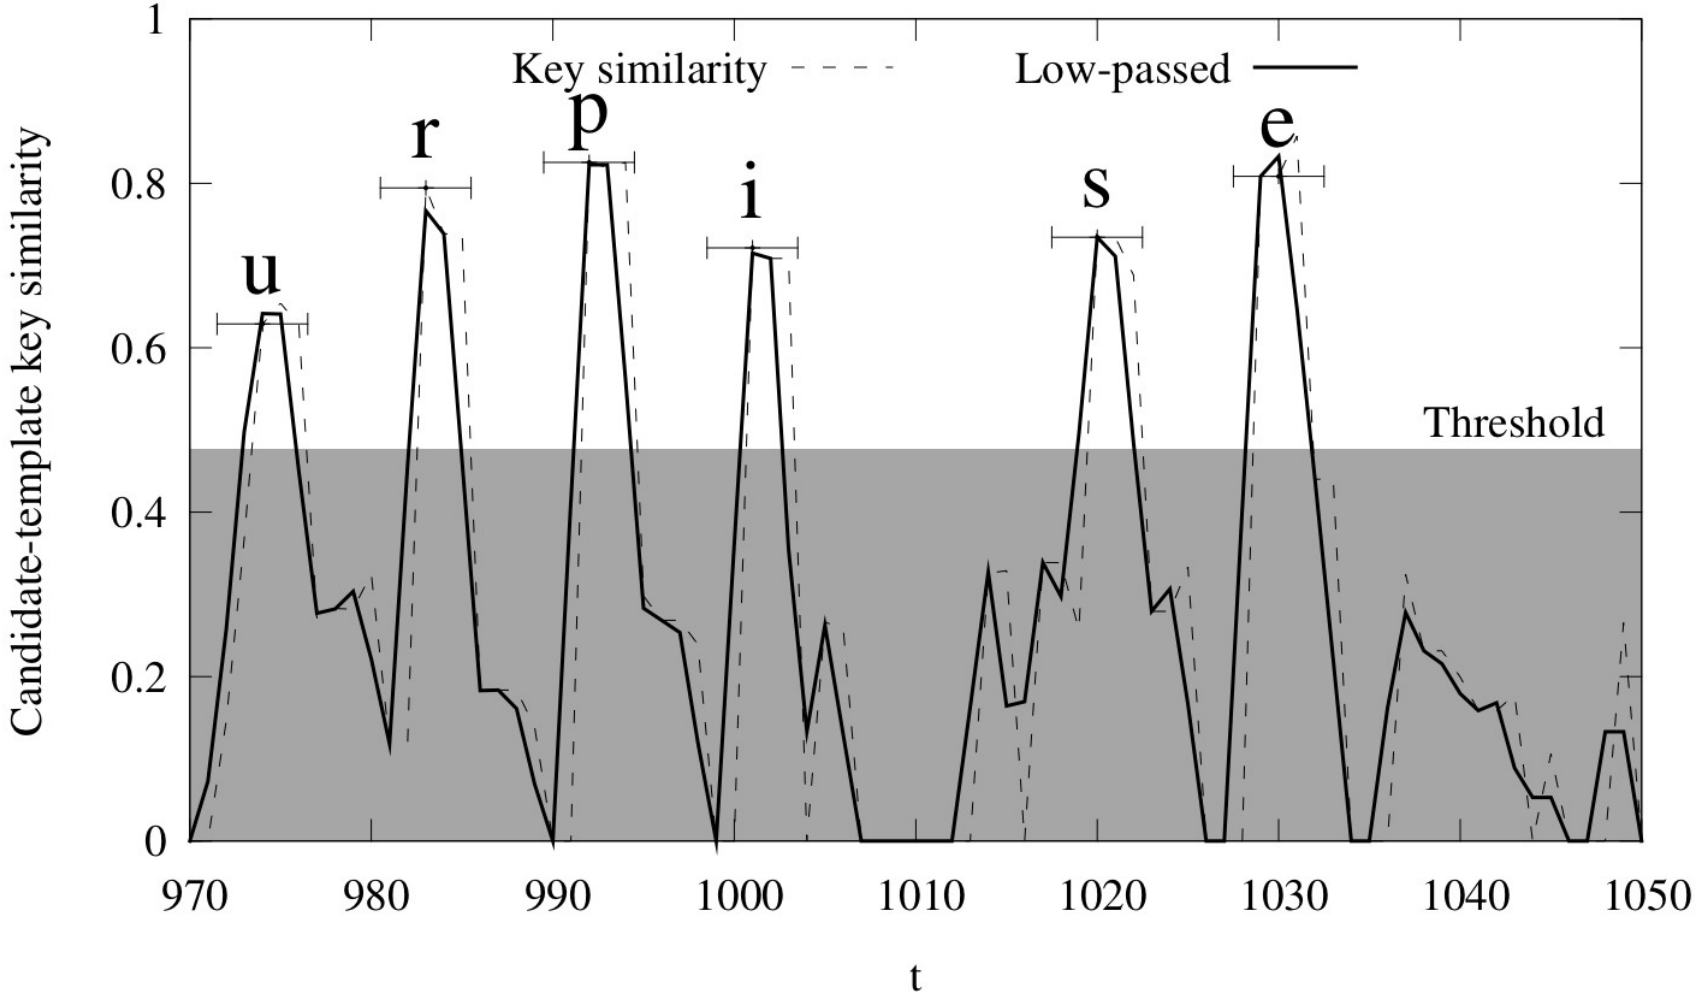
Fast Pruning

- Computing the key similarity is **expensive**
- Black-white distribution of the ROI
- %B/W-**heuristic** is way faster



Key Sequence Analysis

- Find maxima of the key similarity



Implementation Details

- **Phase 1**
  - C++
  - OpenCV
- **Phase 2-3**
  - Matlab
  - Compiled into C
- **Threshold estimation**
  - Confidence interval (mean, variance)
  - Video samples collected in “no typing” conditions

DEMO

http://www.youtube.com/watch?v=aPuS8kNI30U

http://www.youtube.com/watch?v=t9BxB3dO0KQ

Experimental Evaluation

- Types of text
  - Context-free
  - Context-sensitive
- 3 attackers, 3 victims
- Goals
  - Precision and speed
  - Resilience to disturbances

Overall evaluation procedure

- **Typing**
  - 3 victims are given the input text
  - Victims type text on their iPhones
- **Recording**
  - A recording camera was used for repeatability
- **Attack**
  - 3 attackers are provided with the videos
  - Attackers have “infinite” time to analyze videos
- **Comparison**
  - Automatic attack vs. human attackers

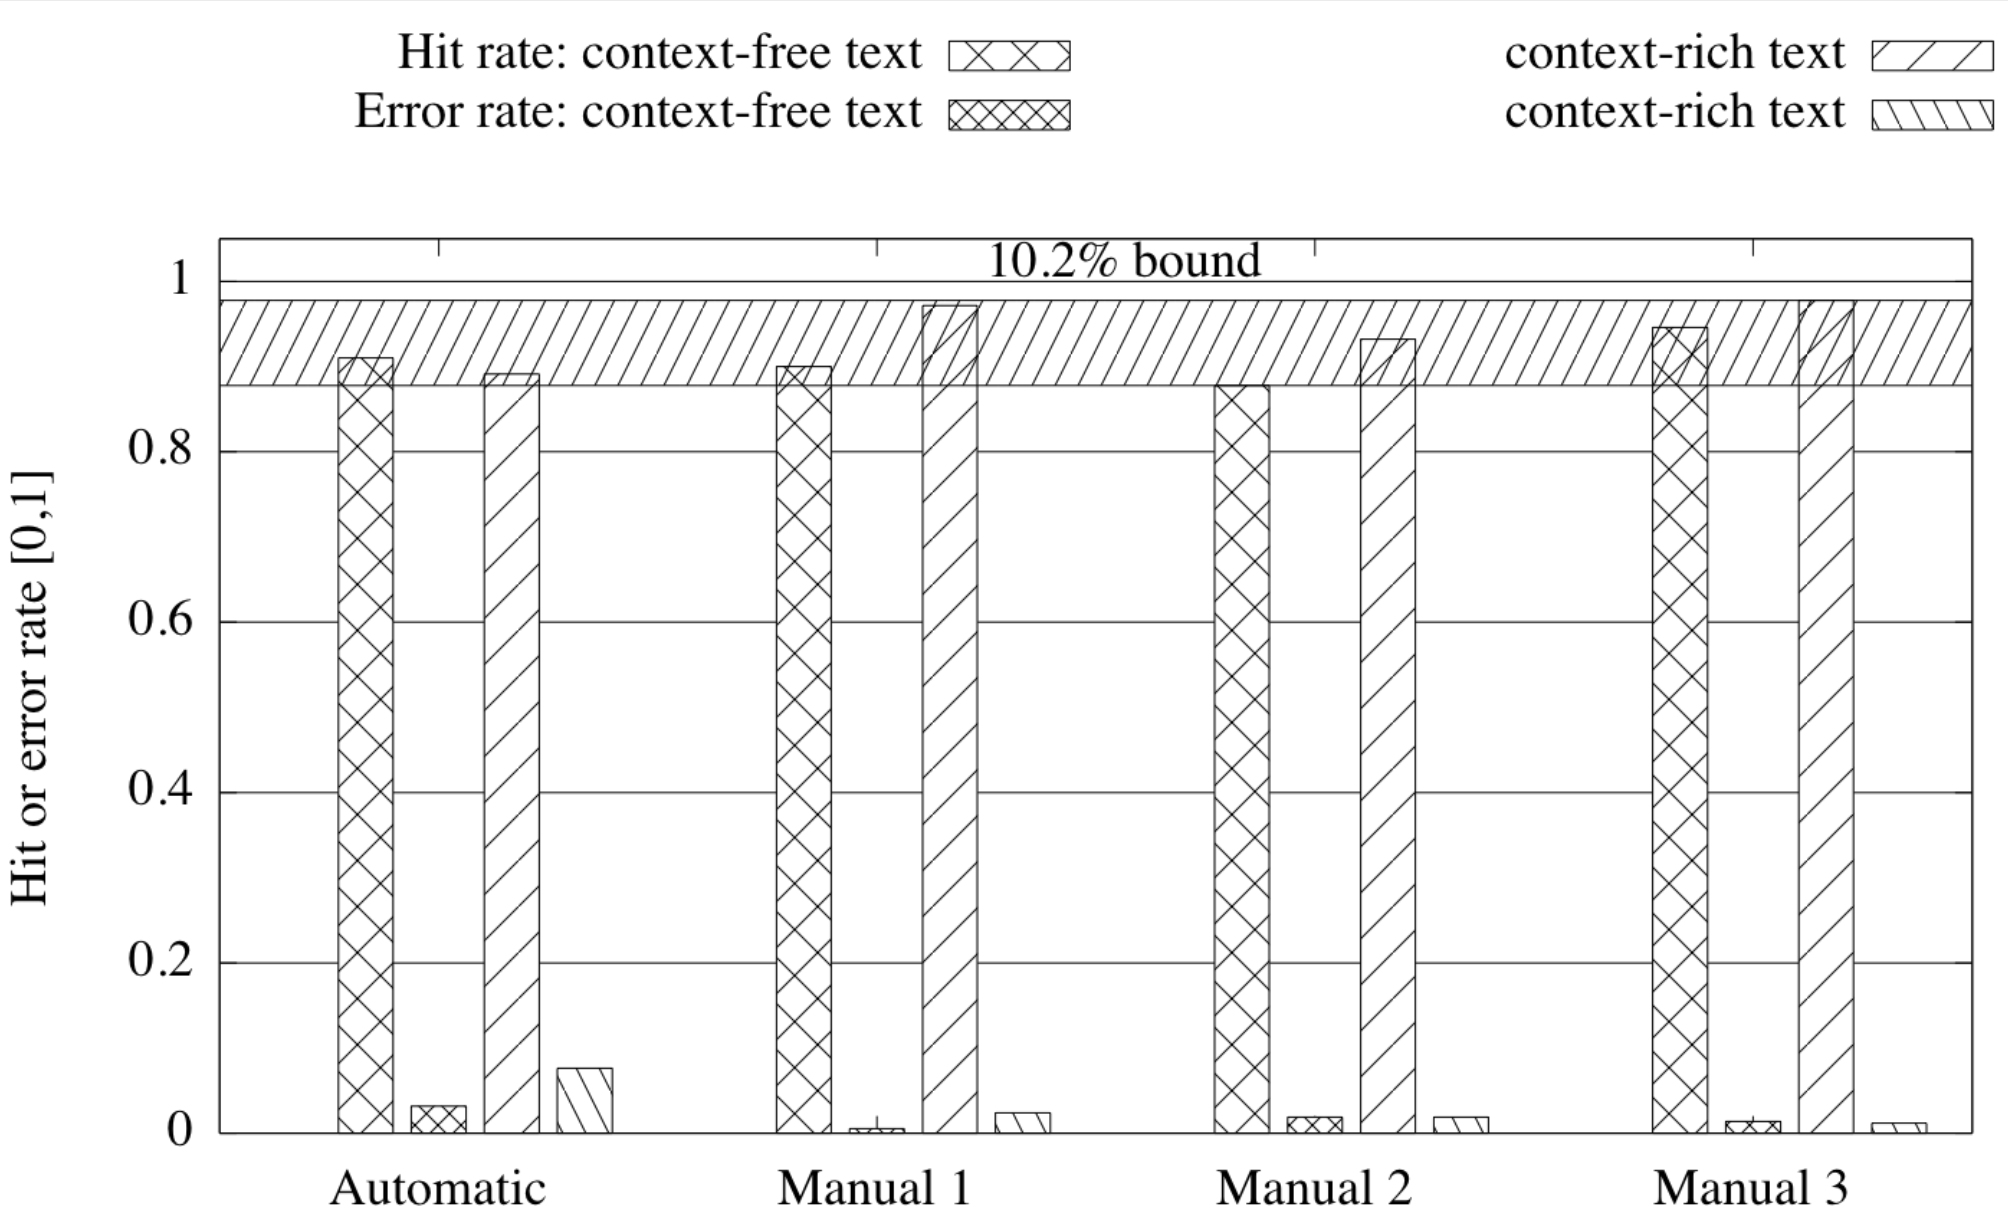
Context-free text

spent chapter foundation identified because first which material notation summarized time spent volume much technical little system reference figured number measurement lorem referring abstract text introductory shown in the we observing request second objective books relationship astute formidable quantile convenient remainder between utilizable tool law resident minutes exemplified the product then temporarily number will per systematic average accumulated south specialty terminal numerous introduce

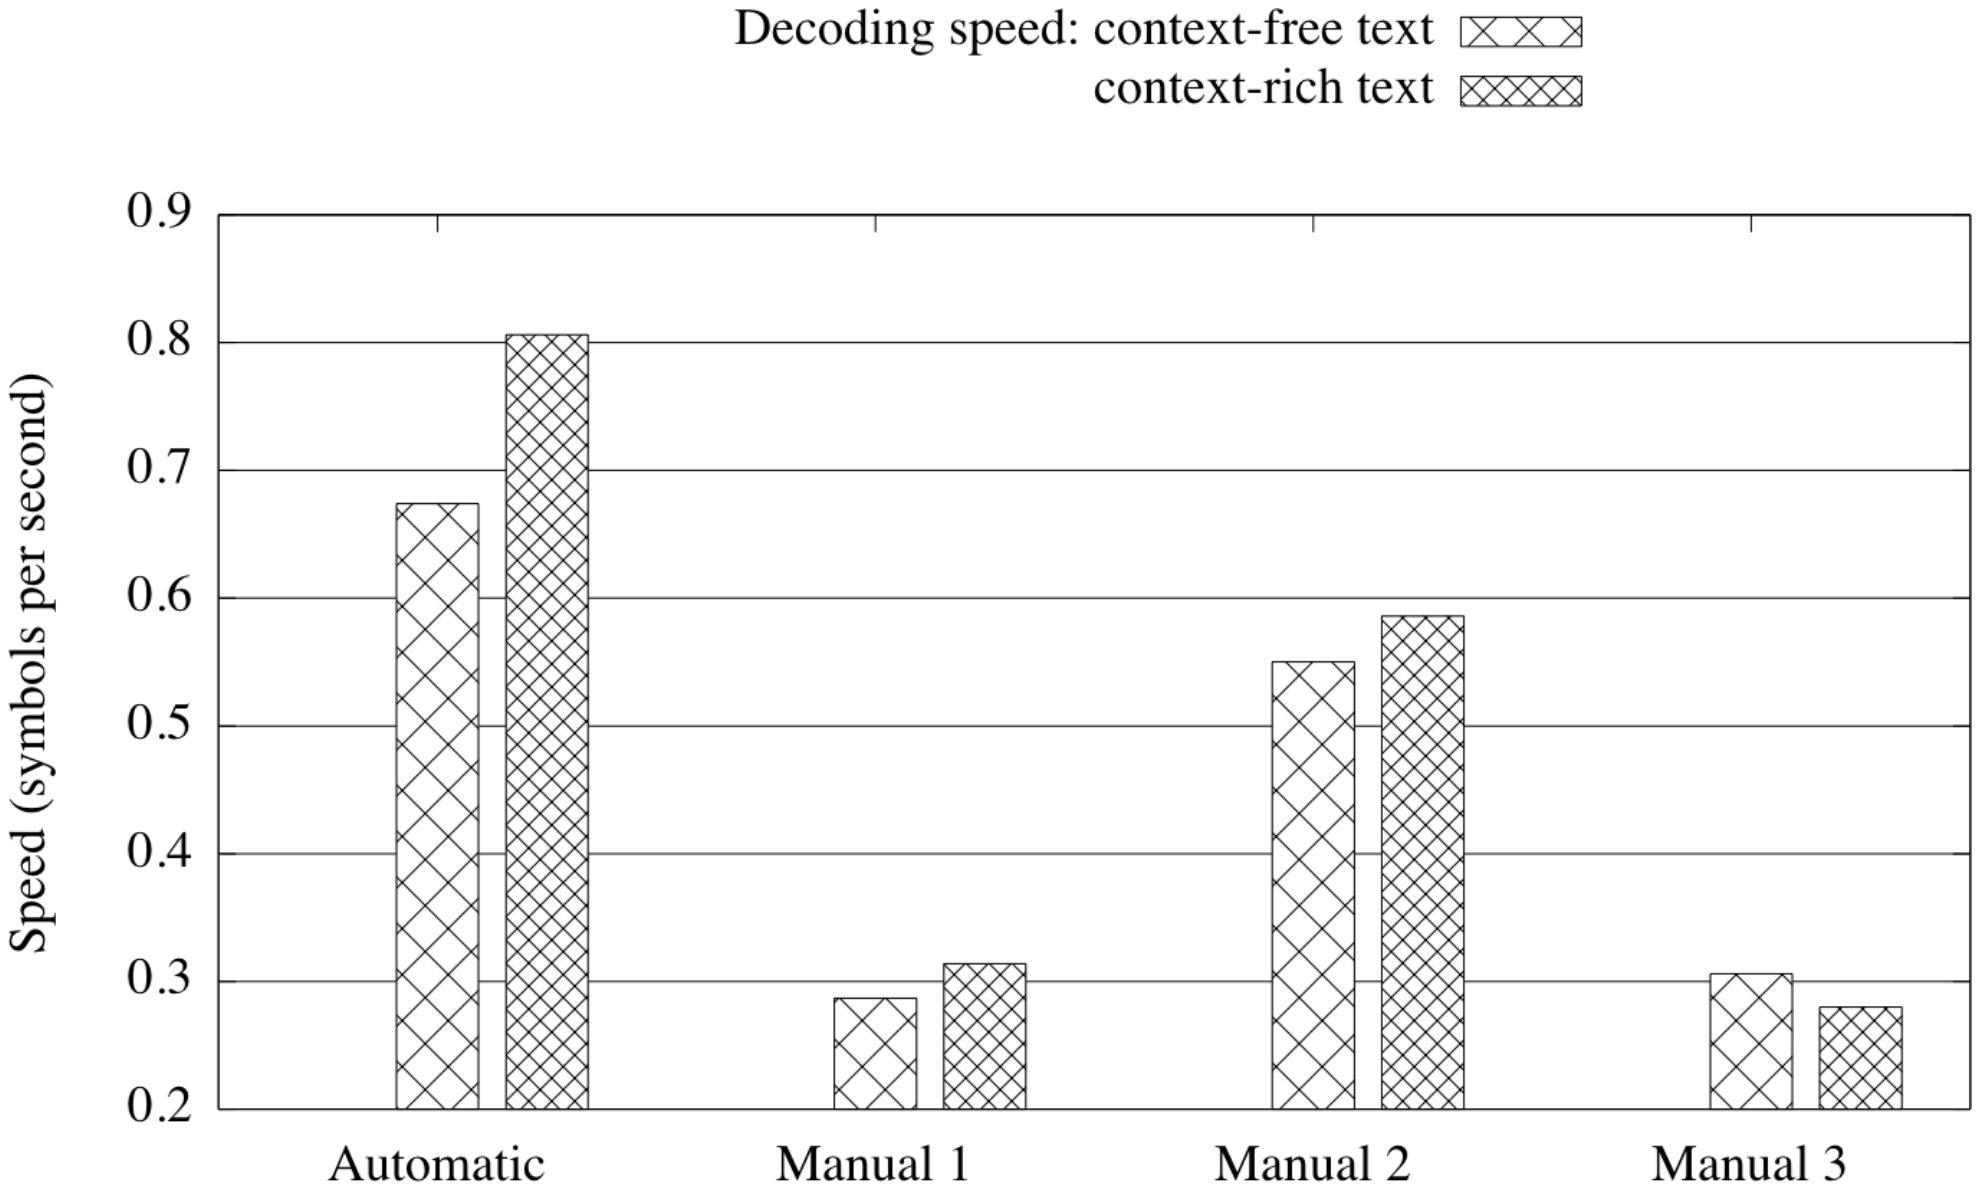
Context-sensitive text

close your eyes and begin to relax take a deep breath and let it out slowly concentrate on your breathing with each breath you become more relaxed imagine a brilliant white light above you focusing on this light as it flows through your body allow yourself to drift off as you fall deeper and deeper into a more relaxed state of mind now as i

Almost as precise as a human



Way faster than a human



Extreme conditions

Aberration	Phase 1	Phase 2-3	
		h%	ε%
1) Permanent occlusion	difficult	44.44	33.33
2) Shake device	feasible	67.74	8.70
3) Shake camera	feasible	96.00	4.00
4) Shake device + camera	unfeasible	0.00	-

Limitations

- **Non-magnifying keys**
  - Space (on iPhone only)
  - Layout-switching keys
  - **Mitigation**
    - Device-specific heuristics
    - E.g., on iPhone, exploit color-changing spacebar
- **Alternative layouts** (minor limitation)
  - **Mitigation**
    - Detect switch
    - Loop through different templates during detection

Alternative layouts

iSpy: A Happy Coincidence

- [Raguram, CCS 2011]
- Appeared at the same conference
- Completely different approach
  - Classification-based
  - They require training
- Really, the very same accuracy 97~98%

Conclusions

- Touchscreen mobile devices are widespread
- Shoulder surfing is automatable
- Automatic shoulder surfing is precise too
- Counteract these attacks with privacy screens
- But…

Finger tracking

- **Challenge**
  - How to detect tapping?

THANKS!

SysSec: A European Network of Excellence in Managing Threats and Vulnerabilities in the Future Internet

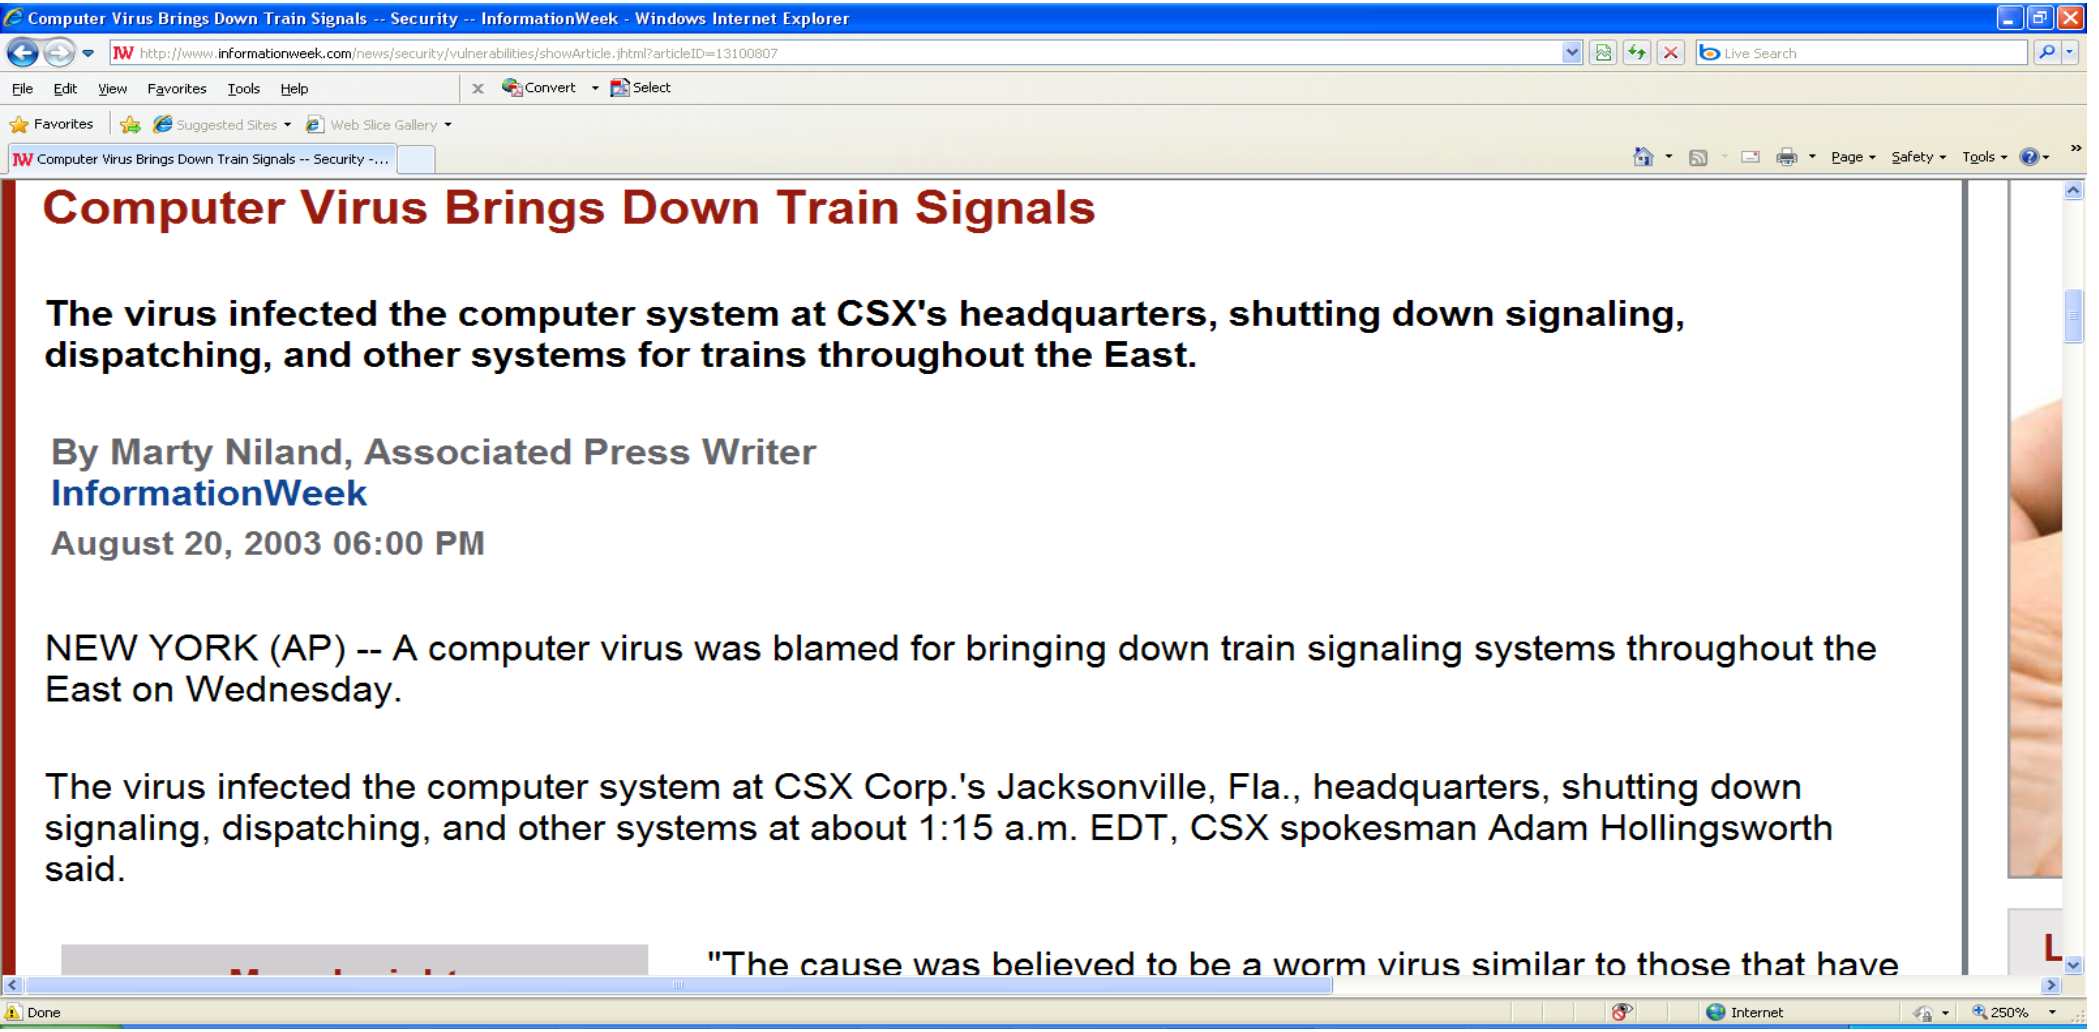
What is the impact of attacks?

"… potential (cyber)attacks against network infrastructures may have widespread and devastating consequences on our daily life: no more electricity or water at home, rail and plane accidents, hospitals out of service"

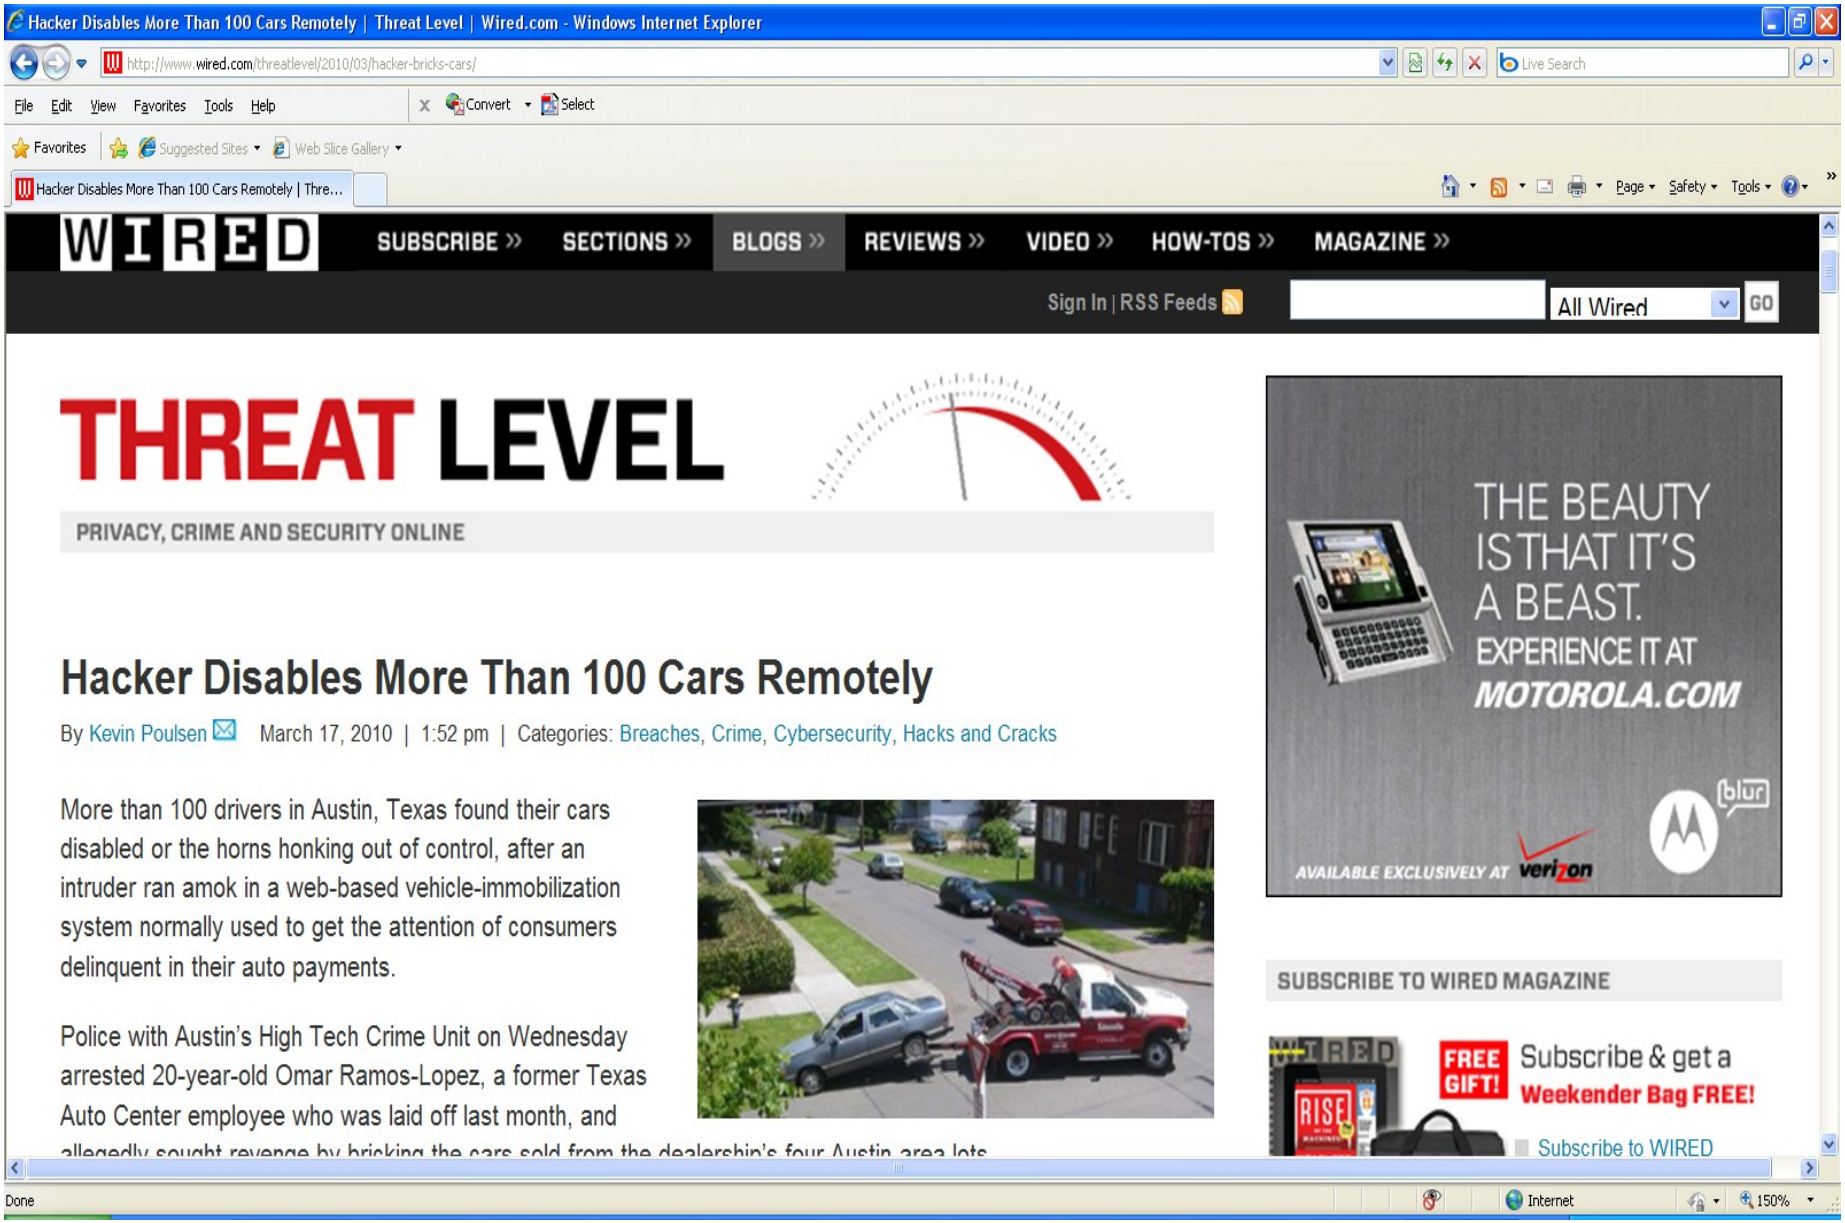
Viviane Reding,
Vice President European Commission

Government: The Parliament under attack

Transportation: No train signals

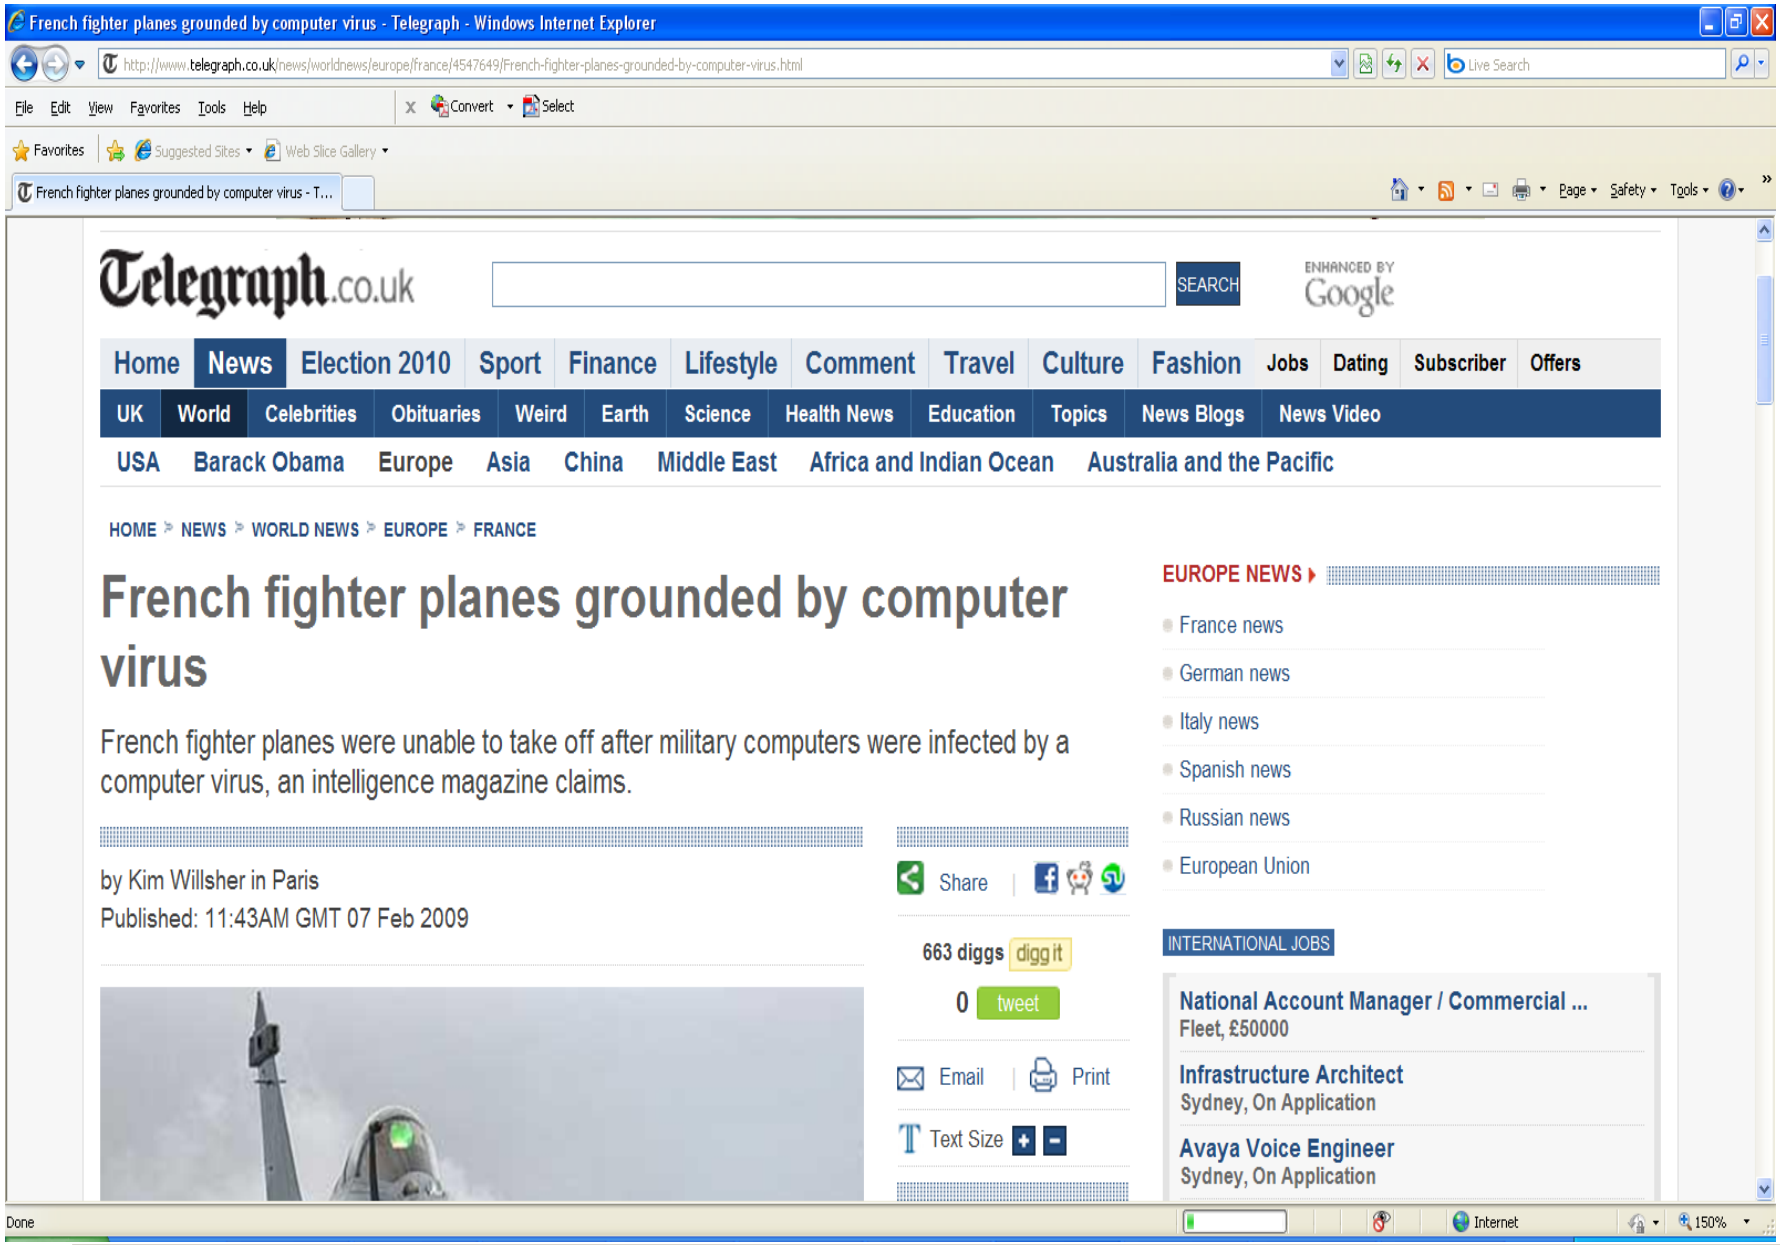


Transportation: No cars

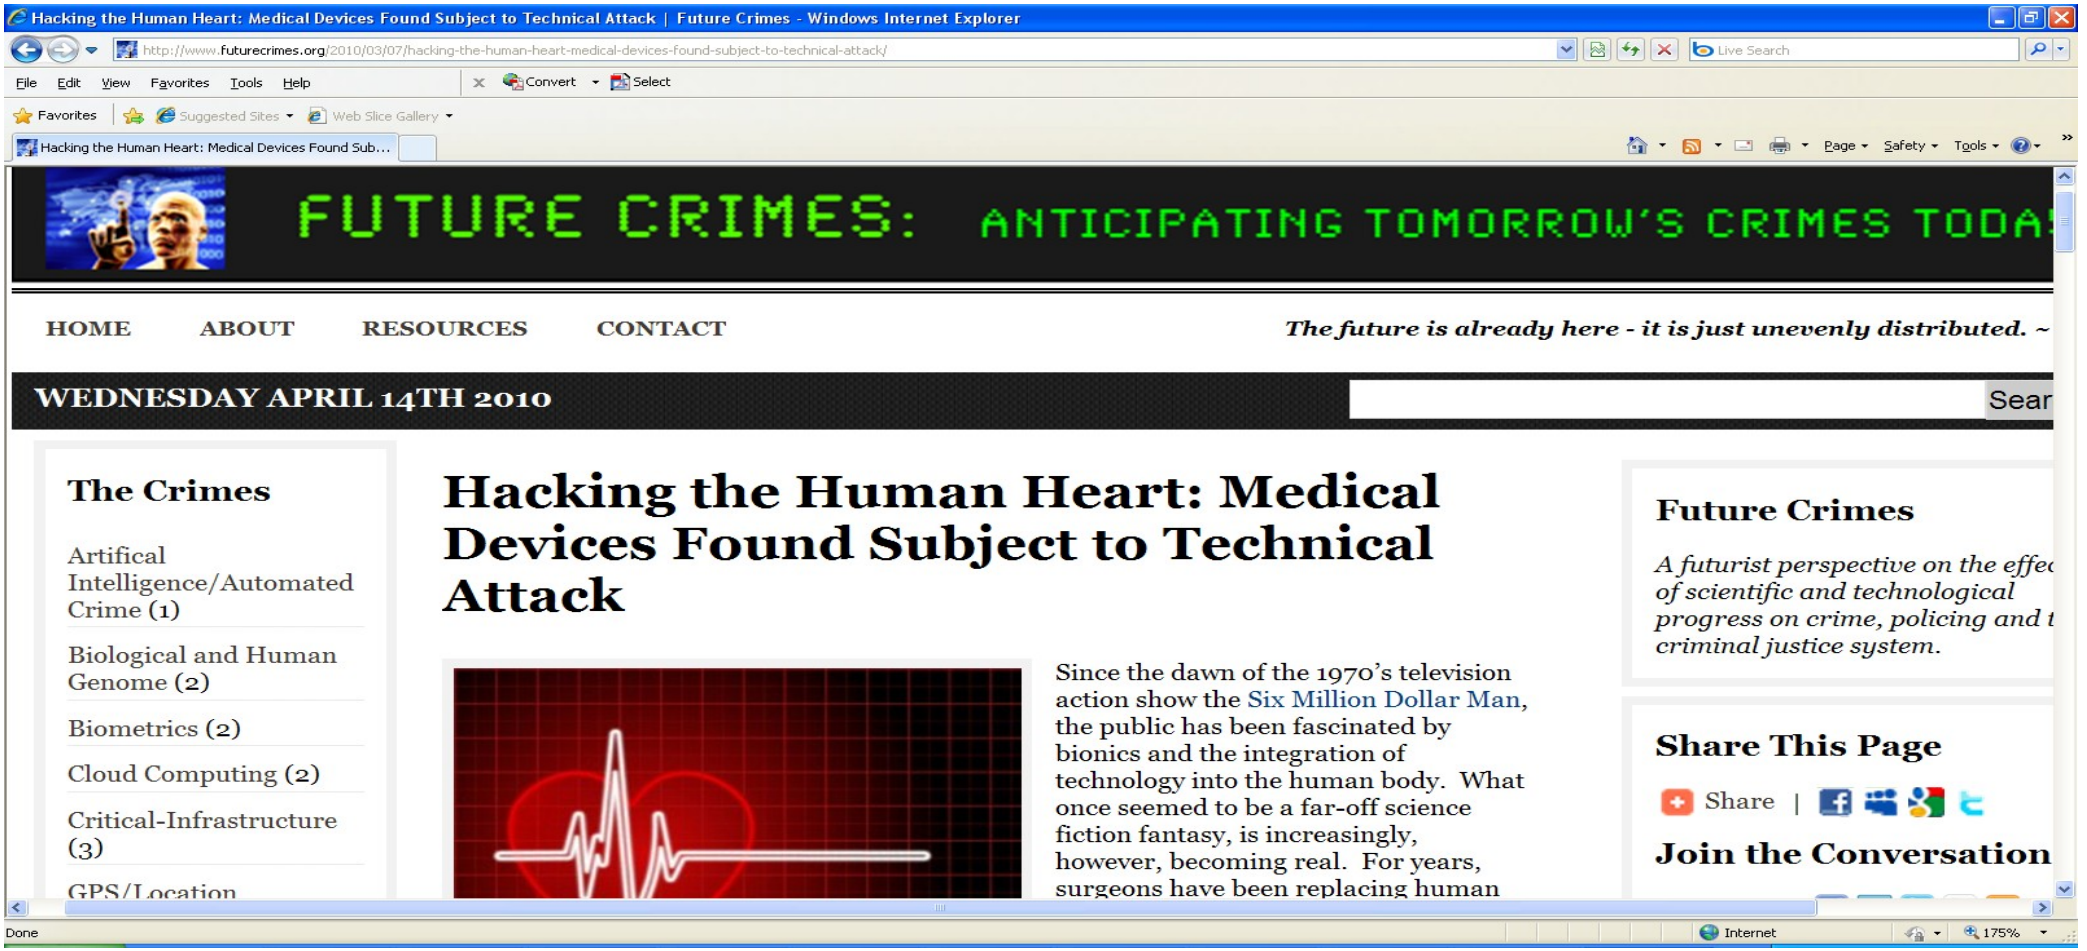


Energy: No electricity

Defense: fighter planes grounded



What about our lives? Are they next?



What's next?

SysSec: managing threats and vulnerabilities for the future Internet
a Network of Excellence (2010-2014)

Why?

We need to work towards solutions

We need to collaborate

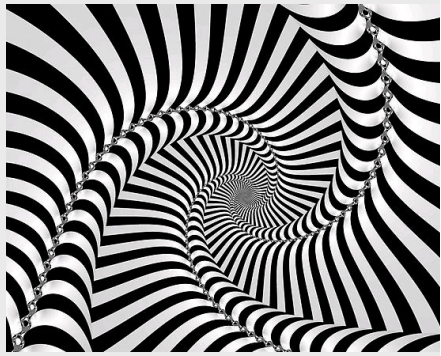
At a European level

With our international colleagues

Around the world

- Poli. di Milano (IT)
- Vrije Universiteit (NL)
- Institute Eurecom (FR)
- BAS (Bulgaria)
- TU Vienna (Austria)
- Chalmers U (Sweden)
- TUBITAK (Turkey)
- FORTH – ICS (Greece)

What is SysSec?



SysSec proposes a *game-changing* approach to cybersecurity:

Currently Researchers are mostly reactive:

they usually track cyberattackers *after* an attack has been launched

thus, researchers are always one step behind attackers

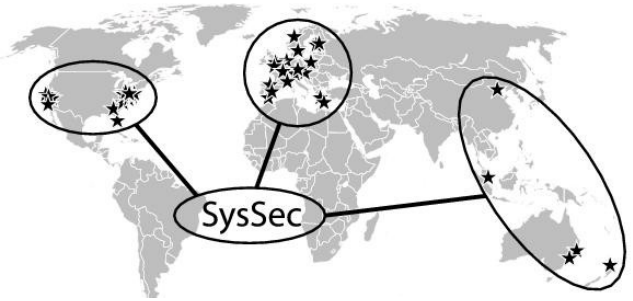
SysSec aims to break this vicious cycle

Researchers should become more *proactive*:

Anticipate attacks and vulnerabilities

Predict and prepare for future threats

Work on defenses *before* attacks materialize.



SysSec Aim and Objectives (I)

Create an active, vibrant, and collaborating **community of Researchers** with
the expertise, capacity, and determination to anticipate and mitigate the emerging threats and vulnerabilities on the Future Internet.

SysSec aims
to create a **sense of ``community"** among those researchers,

to **mobilize** this community,

to **consolidate** its efforts,

to **expand their collaboration** internationally, and

become **the single point of reference** for Systems Security research in Europe.

SysSec Aim and Objectives (II)

Advance European Security Research well beyond the state of the art

research efforts are fragmented

SysSec aims to **provide a research agenda** and

align their research activities with the agenda

make SysSec **a leading player** in the international arena.

SysSec Aim and Objectives (III)

Create a **virtual distributed Center of Excellence** in the area of emerging threats and vulnerabilities.

By forming a critical mass of European Researchers and by aligning their activities,

Have the gravitas needed to play a **leading role internationally**, empowered to undertake large-scale, ambitious and high-impact research efforts.

Create a **Center of Academic Excellence** in the area

create an education and training program targeting young researchers and the industry.

lay the foundations for a common graduate degree in the area with emphasis on Systems Security.

SysSec Aim and Objectives (IV)

Maximize the impact of the project by proactive **dissemination** to the appropriate stakeholders.

disseminate its results to international stakeholders so as to form the needed strategic partnerships (with similar projects and organizations overseas) to play a major role in the area.

dissemination within the Member States will

reinforce SysSec's role as a center of excellence and

make SysSec a beacon for a new generation of European Researchers.

Create Partnerships and **transfer technology to the European Security Industry**.

create a close partnership with Security Industry

facilitate technology transfer wherever possible to further strengthen the European Market.

SysSec: How can you collaborate

Contribute to the research roadmap/agenda

Provide feedback on emerging threats

Share your ideas on future security issues

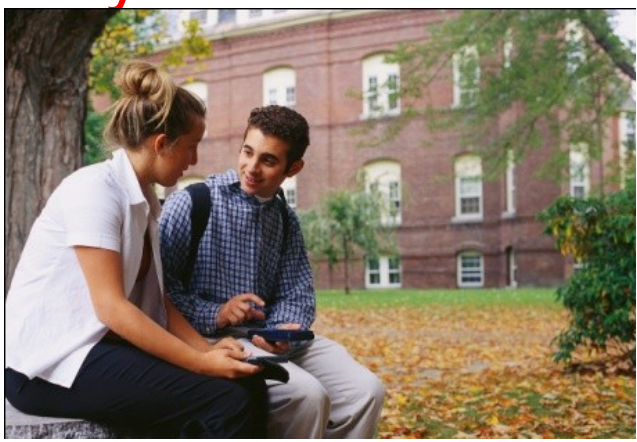
Contribute to our “systems security” University curriculum

Contribute homeworks/exams

Contribute/use lab exercises

Teach some of the courses at your University

Share some of your course material



Become an “Associated Partner” of the project
